

Schedule – Sprint 2

Summary:

During our first standup this sprint, we re-evaluated the priority of the user stories in our product backlog. Tasks were divided and assigned to multiple members based on an agreed upon difficulty per user story. User story PROM-7 defined a very core functionality of the application especially corresponding to the backend and was initiated during sprint 1 and completed during sprint 2. This opened the path to multiple user stories that relied upon it which we also aimed to complete within this sprint. Hence the path from PROM-7 to PROM-6 defines our critical path.

How did we manage to keep our sprint on schedule?

We made use of Trello's tacking board to keep track of the progress for each user story and who was assigned to complete it.

We had regular standups to determine if we had any blockers and redefine our original schedule if required.
