Summary for Sprint 3:

We unfortunately came to a time crunch for the first part of the sprint, having to rush the final parts of PROM-12 in order to kickstart the development of this sprint's user stories.

During our first standup this sprint, we also re-evaluated the priority of the user stories in our product backlog.

Tasks were divided and assigned to multiple members based on an agreed upon difficulty per user story.

Once PROM-12 came to completion, the team quickly got to work on the remaining tasks for the sprint. We took a hit in development due to Assignment 1 coinciding with the timeframe of this sprint, but we fortunately managed to finish everything this sprint.

How did we manage to keep our sprint on schedule?

We made use of Trello's tacking board to keep track of the progress for each user story and who was assigned to complete it.

We had regular standups to determine if we had any blockers and redefine our original schedule if required.
